NRC Schedules Public Outreach to Discuss Diablo Canyon Power Plant Performance

Arlington, Texas — Nuclear Regulatory Commission staff will hold an [information session](#) June 16 to explain how the Diablo Canyon nuclear power plant performed in 2025 and to answer questions from the community. The session will allow residents to speak directly with NRC inspectors who evaluate the plant throughout the year.

The NRC's annual assessment found that Diablo Canyon operated safely in 2025. All inspection findings and performance indicators were of very low safety significance, so the plant will continue under the agency's normal level of oversight, which includes thousands of hours of inspections each year.

Diablo Canyon is a two-unit plant operated by Pacific Gas and Electric Co. near San Luis Obispo, California. The information session will be held at 1:15 p.m. Pacific time during the Diablo Canyon Independent Safety Committee meeting at the Avila Lighthouse Suites, Point San Luis Conference Room, 550 Front St., in Avila Beach, California.

The NRC [Reactor Oversight Process](#) uses a color-coded system that tracks inspection findings and performance indicators.

The annual assessment [letter](#) for Diablo Canyon, including upcoming inspection plans, is available on the NRC website. Current [performance information](#) is also available and updated quarterly.

The U.S. Nuclear Regulatory Commission was created as an expert, technical agency to protect public health, safety, and security, and regulate the civilian use of nuclear materials, including enabling the deployment of nuclear power for the benefit of society. Among other responsibilities, the agency issues licenses, conducts inspections, initiates and enforces regulations, and plans for incident response. The NRC is collaborating with interagency partners to implement reforms outlined in new Executive Orders and the ADVANCE Act to streamline agency activities and enhance efficiency.
