NRC Schedules Public Outreach to Discuss Grand Gulf Plant Performance

ARLINGTON, Texas — Nuclear Regulatory Commission staff will conduct [informal public outreach](#) on July 11 to share the 2025 safety performance of the Grand Gulf Nuclear Station and answer questions from the public. The outreach will allow residents to speak directly with NRC inspectors who evaluate the plant throughout the year.

The NRC concluded that the Grand Gulf plant operated safely throughout 2025. All inspection findings and performance indicators were of very low safety significance in 2025, resulting in planned normal inspections. However, during the first quarter of 2026, the plant entered an increased level of oversight due to a finding of low safety significance, which will result in additional oversight and inspections.

Grand Gulf is a one-unit plant operated by Entergy Operations Inc. near Port Gibson, Mississippi. The public outreach will take place from 9 a.m. to noon during the Second Saturday community event at Crawford Square, 1398 Washington Street, in Vicksburg, Mississippi.

The NRC [Reactor Oversight Process](#) uses a color-coded system that tracks inspection findings and performance indicators.

The annual assessment [letter](#) for the Grand Gulf plant, including upcoming inspection plans, is available on the NRC website. Current performance information is available on the NRC [website](#) and updated quarterly.

The U.S. Nuclear Regulatory Commission was created as an expert, technical agency to protect public health, safety, and security, and regulate the civilian use of nuclear materials, including enabling the deployment of nuclear power for the benefit of society. Among other responsibilities, the agency issues licenses, conducts inspections, initiates and enforces regulations, and plans for incident response. The NRC is collaborating with interagency partners to implement reforms outlined in new Executive Orders and the ADVANCE Act to streamline agency activities and enhance efficiency.
